The Problem

The Modern Venue Is Still **Managed Reactively**

Lack of Operational Visibility

Blind to crowd flow, occupancy, and space utilization. **Difficulty optimize staffing or respond to peak hours dynamically.**

Energy Inefficiency

HVAC systems operate on fixed schedules regardless of occupancy, **wasting 20-30% of energy and driving unnecessary costs.**

Fragmented Sustainability Data

Energy and carbon metrics tracked with **no real-time intelligence or optimization capability.**

Exhibitor Visibility

Exhibitors have limited **live visibility into engagement during the event.**

Introducing Sentina**AI**

One platform. Four role-based surfaces.

Security

SentinaAI / Operations Dashboard

Operations Dashboard

Live occupancy, crowd flow, comfort index, device health, and hall performance at a glance.

**Machine learning
algorithms:**

RandomForestRegressor

RandomForestClassifier

Occupancy

4,218

Comfort

76.70

Crowd Flow

One platform. Four role-based surfaces.

Security

SentinaAI / Sustainability Dashboard

Sustainability Dashboard

Energy consumption, carbon forecast, HVAC efficiency, and environment health monitoring.

Machine learning algorithms:

RandomForestRegressor

RandomForestClassifier

Energy

2.42 kWh

Health Score

85.45

HVAC: 85% · Carbon: 1 kg · Status: Optimal

One platform. Four role-based surfaces.

SentinaAI / Exhibitor Portal

Exhibitor Portal

Booth analytics, AI confidence scoring, competition density, and engagement heat mapping.

Machine learning algorithms:	Spatial-Temporal GCN (per timestep) + LSTM (across time)
-------------------------------------	--

AI Confidence
94%

Density
Medium

One platform. Four role-based surfaces.

Security

Additional Features

Digital Twin

SOC
Operations
Sustainability

- Real-time IoT sensor fusion
- Sub-second telemetry updates
- Edge-synced 3D twin

Navigation

SOC
Operations
Sustainability
Exhibitors

- Live occupancy heatmap rendering
- Crowd-aware dynamic routing

Guided Assistant

Sustainability
Operations
Exhibitors

- Structured workflows, not open-ended chat
- Role-aware assistant with structured analysis

Reportable Outcomes

Sustainability
Operations
Exhibitors

- Draft, preview, & generate workflows
- Role-based report templates
- PDF & XLSX

A modern glass skyscraper at night, with a purple and blue color overlay. The building's glass facade reflects the surrounding environment, and the sky is a deep blue. A white rounded rectangle is centered on the image, containing the word "Demo" in a dark blue, bold, sans-serif font.

Demo

What Makes SentinaAI Different

Connect

Unify every system, sensor, and data stream across your venue into a single coherent operational layer.

Protect

Monitor threats, contain anomalies, and maintain security awareness in real time across all zones.

Automate

Deploy guided workflows and Artificial Intelligence that help teams respond faster with structured actions.

Visualize

See your entire venue through live dashboards, digital twins, and spatial intelligence layers.

Future Improvements

Visitor Portal

Mobile-first venue guidance for attendees

SOC AI Layer

Smarter detection, correlation, & triage

AI Assistant

Natural-language, **context-aware support**

Persistent Analytics

Time-series storage & scheduled reporting

Audit & Log Integrity

Stronger tracking of user & system actions

A modern glass skyscraper at night, with a purple and blue color overlay. The building's glass facade reflects the surrounding environment, and the overall scene is dimly lit, emphasizing the architectural structure.
